

Dominique Malenfant, Vice President, Global Technology, GE Transportation

Dominique Malenfant is the Vice President of Global Technology for GE Transportation. In this role, he is responsible for the overall global technology strategy for the company.

He previously served as the Vice President of product and engineering for the Transport Propulsion and Control Business at Bombardier Transport, overseeing 1,200 professionals across eight different countries. Through his 23 years in transportation, he managed Bombardier Transport's North American division where he was responsible for product management, engineering and supply management. He also led the Center of Expertise R&D group, and has experience in plant management, engineering quality assurance, systems engineering, and project management.

Dominique graduated from Laval University in Quebec City with a bachelor's degree in Electrical Engineering.
